Sprint 1 Report

Actions to stop doing:
- Stop waiting to test different languages/technologies in our own environments until late.
- Underestimating the time it takes to learn new technologies.

Actions to start doing:
- Dedicate collaboration time to work with other team members that are knowledgeable in the technologies used in the project.
- Making sure we have all the dependencies to run the python back-end

Actions to keep doing:
- Have better meetings with sub-groups to complete tasks collaboratively
- Everyone going to meetings and engaging with the group

Work completed/not completed:
- We completed some of the user stories this sprint. We plan on continuing the unfinished user stories in the next sprint.
- **Completed:** As a user I need a webpage to access this software tool
- **Half-Completed:** As a user I need to Perform FM synthesis using keyboard input

Work completion rate:
- We completed less tasks than we set out to complete.
- This sub optimal completion rate was due to the time taken to familiarize ourselves with the concept of our project, and the technologies used to make our project.
